

## Custom Switch Products

Tapeswitch specializes in the design and manufacture of custom switching products for sensing, signaling, and safety applications. If you do not find exactly what you need within our standard product offering, we can still most likely meet your exact application requirements.

Shown below are some examples of unique switch designs. Over the years, Tapeswitch has made thousands of such products to meet specific customer requirements.

### Enclosed Illuminated Switch

This NexGen Enclosed Switch provides a crisp, contemporary look. It has found application in office settings factories, and in the interior of transit vehicles.

Graphics or messages can be placed under the lexan cover, which prevents them from being worn or peeled off. It is possible to coordinate the switch colors with office or vehicle color schemes.

### Probe Arm Sensor Assembly

This probe arm sensor is used on CNC gear inspection systems to protect the probe arm from damaging impacts. An array of nine ribbon switches in a 4-inch square aluminum shell detects contact in the x, y, and z axes.

This is an example of an innovative design to solve a very specific application problem.

Whether you have an immediate requirement or are planning a long-term project, you can count on our mechanical and electrical engineers to come through for you. We have built our reputation on rapid response, customer commitment, and sensible solutions.

If you would like to speak to someone, give us a toll-free call at 1-800-234-8273. For general product information, ask for Customer Service, or if you have a specific application that requires technical information, ask for Application Engineering. You will get a person and not an automated menu. [Click here to email us.](#)
