

DaDo Emergency Signaling Strip

The **DaDo Emergency Signaling Strip** is a press-at-any-point switch strip that can be easily operated by a finger, hand, elbow, or arm. It is ideal for installation in hospitals, residential care homes, police stations, and public buildings, or anywhere people may need to signal for help or assistance. It is designed to be mounted along the wall of a room or corridor and can be configured to continue around inside or outside corners. It can also be installed under a desk or counter, or on the floor.

Features & Benefits

- Operation over the entire length
- Resists vandalism or tampering
- Easy installation, no maintenance
- Robust and reliable design
- Compatible with standard wire raceways
- Accommodates surface or in-wall wiring

Typical Applications

- Police stations
- Residential care homes
- Hospitals
- Public Buildings
- Transportation facilities
- Emergency vehicles
- Assembly lines

Summon Help - in face-to-face situations where there is the possibility of conflict or personal danger.

Summon Assistance - in medical or residential care facilities, in ADA applications, such as toilets, or in factory settings.

Why is the **DaDo Signaling Strip** better than a panic button or emergency switch? The answer is in its **accessibility**. No matter how sophisticated an alarm system may be, it is useless if the signaling device is out of reach.

The **DaDo Signaling Strip** can be configured and installed to always be within reach. On the wall, on the floor, on or under a desk or counter, press it anywhere and a signal is sent.
