

Do-It-Yourself Ribbon Switch Kits

These kits allow you to assemble and install ribbon switches in the field. They are typically used for ad hoc applications, prototyping or temporary installations.

Standard and heavy-duty termination sets are available. For Ribbon Switch types 102-AK and 102-Bk, "T" and "L" connectors are available which can be used to construct rectangular and branching layouts.

Each Do-It-Yourself Kit Contains:

- 50 feet of ribbon switch material.
- 6 molded terminal sets, each with 18" of lead wire.
- Easy to follow instructions.

Optional heavy-duty termination sets offer more strain relief and increased moisture resistance

Please refer to the chart below for the kit number of your choice. Kits can be customized to meet your specific requirements. Extra 50 ft rolls of ribbon switch are available.

For information on specific ribbon switch types, use the links below.
